

Tri-Fit of Anchor Chain & Anchor Pile

Tri-Fit

We are tasked with mobilization for 1/3/1/1 of top chain/heavy chain/ground/chain/anchor pile to perform a tri-fit onshore.

The connecting tools used are Tri-plate, H-links and 72/98ton shackles and performed using 1 set 500ton and 1 set 200ton mobile cranes.

Licensed riggers are engaged to perform rig-up and certified by marine warranty surveyor.

The purpose of this exercise is to establish tri-fitting feasibility when sent outbound to offshore high sea.
