

In 2012, we achieve yet another milestone for heavy-lift movement. Together with our Japanese partner, Winstar Group company commissioned the transportation of 2 X HDS reactors (36M X 8M X 7M 560ton each) to end-user Exxon Mobil in Jurong Island, Singapore. Jurong Island being the world's largest oil & gas storage platform.

Detailed engineering calculation and preparation started 3 months prior cargo arrival in Jurong Port from Japan. Entailing cargo stowage study, ballast & trimming calculation, 36 axle-line SPMT load out from 280ft ballastable barge. We

achieved total MWS compliance thru careful planning and usage of suitable equipment.
